EDUCATION

University of Texas at Austin Austin, TX
B.S. in Computer Science, B.S. in Mathematics | GPA: 3.84 May 2028
Relevant Coursework: Algorithms, Operating Systems, Computer Architecture, Data Structures, Probability I
Leadership Experience: Texas Science Bowl (President), UT Programming Contests (Problemsetter)

EXPERIENCE

Software Engineering Intern Incoming Summer 2026
Deloitte Austin, TX
Undergraduate Teaching Assistant Aug 2025 – Present
University of Texas at Austin Austin, TX

- Develop and deliver weekly recitations to **200+ students** on algorithms, graph theory, and discrete mathematics

Undergraduate Researcher Jan 2025 – May 2025
University of Texas at Austin Austin, TX

- Engineered an end-to-end **ETL pipeline** in R (**tidyverse/dplyr**) to ingest, transform, and visualize **4M+ genomic data points**; automated report generation, cutting manual processing overhead by **80%**
- Performed differential expression analysis by comparing gene expression levels across 15 sample sets; identified **20 candidate protein-coding genes** and delivered findings with a 5-member team at the final research showcase

Software Engineer Sep 2024 – Dec 2024
Longhorn Developers Austin, TX

- Shipped production features for “UT Registration Plus” (**100K+ downloads**) across Agile sprints; conducted code reviews and QA to maintain a zero-regression release cadence and streamline extension functionality
- Re-architected schedule UI with a component-driven **TypeScript/React** stack and end-to-end **CRUD** flows; containerized dev/test with **Docker** and tracked work via GitHub Kanban, **boosting downloads 20%**

PROJECTS

Music Release Predictor | *Python, LightGBM, scikit-learn, FastAPI, Next.js, Tailwind CSS*

- Built a full-stack ML application predicting album releases across **90+ artists** with a **22-day median error** and **89% accuracy** within a **6-week window**, utilizing features including seasonal signals and release cadence
- Designed an automated **Python ETL pipeline** via MusicBrainz for data ingestion, deduplication, and export
- Built **FastAPI** endpoints for cached **LightGBM** inference, reducing repeated latency **from 10s to 20ms**

UIL Hub & Market | *Python, JavaScript, GitHub Actions, Monte Carlo Simulation, CI/CD*

- Architected an academic competition data platform, redesigning filtering workflows to reduce latency by **10x**
- Migrated the Flask scraper to a **serverless Cloudflare Workers** backend with an automated **CI/CD pipeline**
- Extended the platform into a full-stack **prediction market** powered by **Monte Carlo simulations** over **20+ years of historical data**, achieving **75% accuracy** on individual Top-3 medalists and **93%** on team placements
- Implemented portfolios and leaderboards maintained by **Neon (PostgreSQL)** for trading and position tracking

TSB Question App | *Express.js, MongoDB, Node.js, REST API, Tailwind CSS*

- Engineered a full-stack **CRUD** application with a **MongoDB** document store for **900+ tournament questions**
- Established **REST API** endpoints for editing and **LaTeX** PDF generation, reducing compilation time **100x**

ACHIEVEMENTS

2nd Place Bloomberg BPuzzled Global Finals Mar 2026
Top 1000 Nationally on the 86th Putnam Exam (Score: 15) Dec 2025
UT Austin ICPC Team (Top 18 from University) Oct 2025

TECHNICAL SKILLS

Languages: Python, Java, C/C++, SQL (PostgreSQL), JavaScript, TypeScript, R, HTML/CSS, $\text{\LaTeX}$
Frameworks & Tools: React, Next.js, Node.js, Express.js, FastAPI, Flask, REST APIs, MongoDB, DynamoDB, Docker, Kubernetes, Git, GitHub Actions, Linux, Tailwind CSS, Pandas, NumPy, scikit-learn
